3M 525 Adhesive or similar

Installation Instructions for Unframed Surface Modular Flooring

1

Modules install as one piece. Do NOT remove supports from modules. Check list for everything that should be in the crate in addition to frames and modules.

If anything is missing, please call C/S at 800 233 8493 as soon as possible.

2

Locate supplied field drawings which show the entire layout. Each labeled section of the drawing will correspond to the labeled physical section.

Layout

3

Proceed with dry fit of all sections by laying each module in its designated location. Mark perimeter of desired layout. This will ensure all sections/patterns line up properly and the entire layout fits with the recess.

Layout

4

Remove the first two modules. Apply adhesive along the entire length of the back of the first module only. Replace first module in recessed area. Continue moving to each adjacent section. Repeat process until final module is installed. Ensure all sections remain flush with each other and surrounding finished floor.

5

Let adhesive cure per manufacturer's recommended cure rate before traffic resumes and/or sections are removed for cleaning.

Recommended Wait Time
24 Hours
