

Regardless of your entrance flooring project size, the field measuring process to determine final sizes for production will be required. Some installers prefer to provide their own measurements to the manufacturer, while others are more comfortable with our experts completing the task. Listed below are services available to our installers.

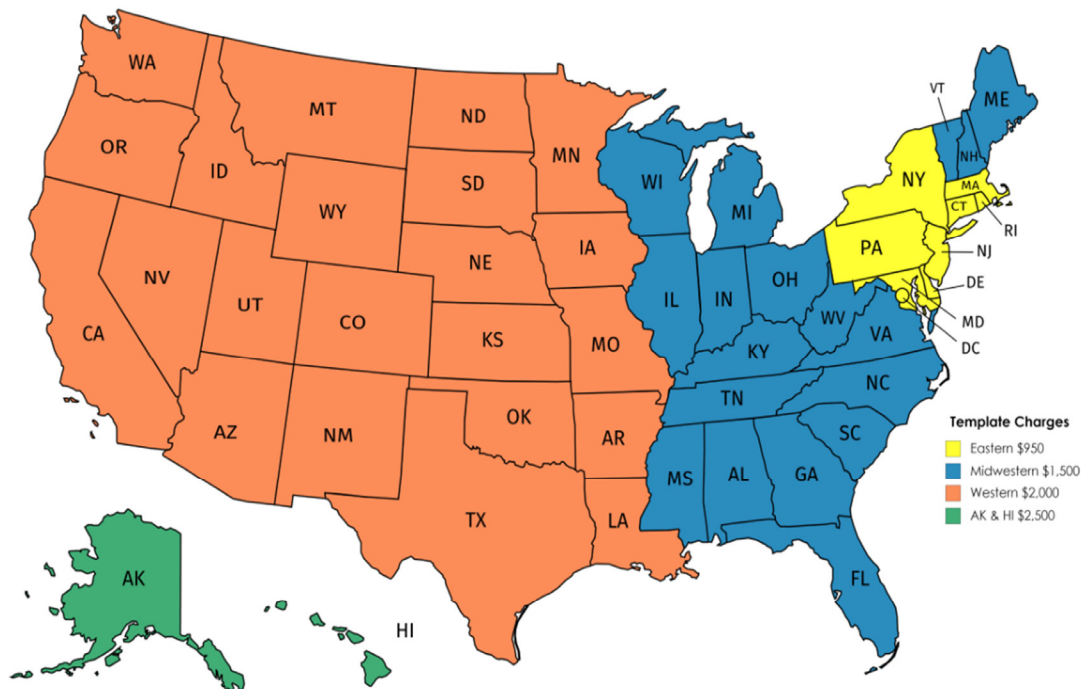

Services Offered

DIY Template Kit

We provide a free kit that includes written instructions (video companion available online), nylon-reinforced kraft paper and tape. Installers can save time and money by creating templates of their installation site and sending them to us for production.

Template Preparation Service

For a fee, CS will measure and create a digital template of each flooring installation area. This removes the liability from the installer, as the units are guaranteed to fit. See the map below for prices by region.

First Day Installation Assistance

For an additional fee we will send a factory technician to spend one to two days on-site for the initial installation start-up process. Guidance on proper product positioning, interpreting instructions and packlists, and providing helpful installation tips and methods will be provided. Note that this is an advisory role only and labor will not be furnished. Contact us for pricing options.

CS Certified Installer Training

Your field personnel can attend a personalized training for hands-on installation instruction at our factory. By the end of this training, attendees will be recommended by CS as trained/preferred installers. Attendees will receive a certificate and the option of being included on the CS website as a preferred installer. Fees for this training vary based on the group size and length of sessions. Contact us at floor@c-sgroup.com or 800.233.8493 to learn more about this program.
