

In addition to wall and door protection, CS offers solutions for entrance flooring and privacy curtain needs.

- Pedisystems® Entrance Flooring stops dirt and water at the door for a cleaner, safer facility.
- Privacy Curtains offer easy-to-change curtains where privacy is essential featuring ligature-resistant break-away carriers for a safe environment.

behavioral health interiors.*

Not All Health Facilities Are Created Equal!

People may believe that hospitals and behavioral health facilities can be built with the same products, but the product specialists at Construction Specialties (CS) knows this isn't true. Detachable material and potential ligature points and barricades, often overlooked in the general hospital environment, are major design concerns for areas like behavioral health facilities.

In order to protect residents and staff in high-risk areas, products need to withstand heavy use and possible misuse for an extended amount of time. This material longevity results in a decrease in maintenance costs and an increase of useable space.

PVC-free Acrovyn® offers interior wall and door protection solutions to meet the unique needs of behavioral health facilities. Acrovyn by Design® provides a secure way to incorporate photography, branding, wayfinding and more onto doors and walls. Along with our various soft hues and simulated woodgrain patterns, CS Acrovyn and Acrovyn Doors, along with many other CS interior products, create a soothing, healing environment.

Barrier Resistant Acrovyn Doors for Patient Safety

◀ Barrier Resistant Acrovyn Doors feature a smaller, more compact wicket door contained within the main door to prevent patients from barricading themselves in a room. The barrier resistant model is made up of our durable Acrovyn and is fire-rated up to 20 minutes. The outer leaf also includes field replaceable Acrovyn edge covers and stiles, to extend the life of the door.

Interior Wall Protection Products for Patient Safety

◀ Ligature-resistant handrails feature continuous aluminum mounting brackets.

◀ Stainless steel crash rail can be specified with non-exposed fasteners.

▼ High-impact rigid wall covering, able to withstand patient force, is supplied with color-matched caulk instead of plastic trims to prevent possible weaponry creation.

◀ Stainless steel corner guards can be specified with tamper-resistant screws.
