

PRODUCT LINES

Acrovyn® Wall Protection
Protect interiors in hospitals, airports and other buildings with Acrovyn wall panels, corner guards, handrails and crash rails. Our wall protection line has a range of options to match your functional and aesthetic needs. From our standard collection to custom graphic wall protection with Acrovyn by Design, Acrovyn can enhance and protect your interiors.

Acrovyn Doors
With a sturdy inner core that's clad in Acrovyn, our doors are a durable force standing sentry at each entry. Add to your aesthetics instead of detracting from them with Acrovyn Doors, which are also customizable with Acrovyn by Design. Our doors can be manufactured to specific functional requirements and are available in fire-rated options as well.

Entrance Flooring Systems
Our range of entrance flooring systems positively impact visitors from their first step. These mats and grids drastically reduce maintenance costs by trapping debris and moisture before it enters a building. Keeping your building clean, reducing liability and making a memorable first impression are all easily achievable with CS' entrance flooring systems.

Expansion Joint Covers
Our knowledge of thermal, wind-sway, settlement and seismic building movement allows us to offer an expert line of expansion joint cover systems. These systems can be used in floor, wall, ceiling, exterior, parking and stadium applications to meet your project's movement criteria. Providing advanced solutions for engineers, architects, designers, contractors and facility owners is our specialty.

Cubicle Curtains & Track Systems
Reduce the risk of healthcare-associated infections (HAIs) while adding to the attractiveness of your facility's interior. From ease of installation with our On the Right Track® system to custom designer curtains and recyclable curtains, we have a curtain to best suit your needs. The perfect blend of form and function is available with our comprehensive options.

PRODUCT LINES

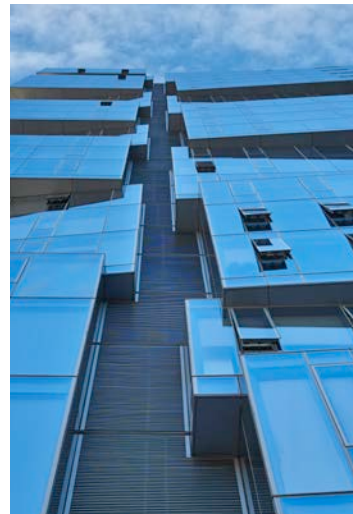

Sun Controls

Our sun controls—the perfect daylight management solution—let the right amount of light in while allowing people to comfortably see outside. From sun controls to daylight systems, we have options to reduce glare, heat gain and energy usage. These products can be custom designed to attach to any building type.

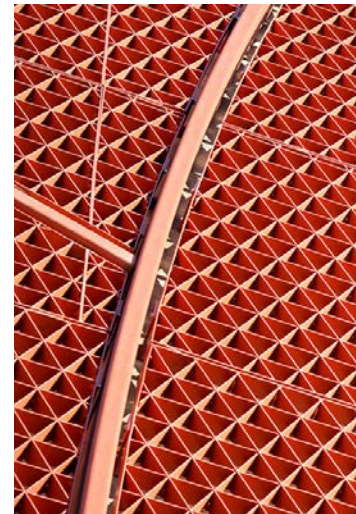

APC Dayliter™

APC Dayliter Vents protect building occupants and firefighters by venting toxic gases and smoke in the event of a fire. This eliminates the need for firefighters to cut holes in the roof when first arriving on the scene, saving valuable time and lives. Our APC vents work with any sprinkler system and meet IBC and all older national codes for your peace of mind.

Architectural Louvers

Our diverse line of louvers can meet the airflow requirements of any project. CS' storm-resistant louvers are up to 100% effective at stopping wind-driven rain. Our hurricane louvers are Dade County Impact Test approved, and our blast-resistant louvers are capable of withstanding up to 12 psi. Our louvers are available in a variety of profiles and can help achieve the aesthetic you want without sacrificing performance or protection.

Architectural Grilles

We offer a variety of blades and decorative grilles designed for your screen and vision barrier needs. We have the right product to either conceal unsightly building components or make a striking statement. Grilles add depth and dimension to a structure, and can be used in new construction and on existing building facades.

Explovent®

Explovent, the industry's only field-testable explosion venting system, is designed for facilities where potentially explosive atmospheres, materials or processes exist. The panels can be tested at any time, and unlike blow-out siding, are resettable after an event. Our Explovent panels are lightweight and designed to NFPA guidelines for ultimate safety.
