

## 5 Reasons Permanent Entrance Flooring Performs Better than Traditional Throw Down Mats

CS Entrance Mats + Grids are used in buildings worldwide, providing long-lasting, sustainable options. They can be easily retrofitted into an existing building or specified during new construction. Our architectural entrance mats and grids keep your entryway ADA-compliant with proper framing, available in various colors, styles and materials.

### 1. Improved safety

Effectively reduces tripping accidents by not bunching up; can be recessed or surface mounted.

### 2. Less tracked debris

Prevents debris from being tracked further into a building by scrapping and drying feet at the entrance; Entrance Flooring Systems are not easily saturated.

### 3. Reduced cleaning & maintenance

Saves time and money on maintenance by trapping dirt beneath the surface; easily roll back or remove the system to clean.

### 4. Better indoor air quality

Prevents dispersal of particles into the air by trapping them underneath.

### 5. Enhanced first impression

Makes a great impression with a variety of colors, styles, and materials to incorporate into any design including patterns and branding.
