
Resilient Solutions

At Construction Specialties, we design with clean in mind when creating our product solutions. Our durable Acrovyn® products are made with materials that do not support the growth of bacteria or fungus, which helps to protect customers and staff*:

PRODUCT OVERVIEW

Following a daily maintenance regime without risk of damage is achievable due to Acrovyn's shallow texture that allows for it to be cleaned easily with most approved cleaning products or denatured alcohol. Unlike Type II Wallcoverings (commercial, contract grade), which are particularly at risk for developing mold and bacterial growth due to condensation, our Acrovyn wall protection, wall coverings, and door products do not support the growth of bacteria and fungus. Our Acrovyn products work together to protect an entire space from damage like dents and scratches, where germs can easily hide, making it a comprehensive solution.

For Acrovyn testing details, see below.

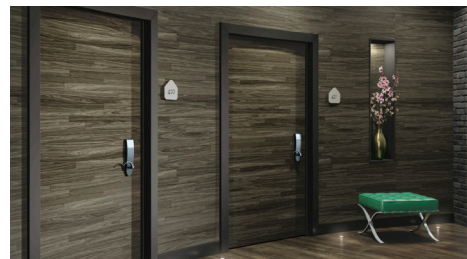

*In an independent test laboratory, Acrovyn was evaluated for resistance to bacteria in accordance with ASTM G 22-76(1996), Standard Practice of Determining Resistance of Plastics to Bacteria, Acrovyn resisted the growth of the Pseudomonas Aeruginosa bacterium culture. [Click for the pdf.](#)

Acrovyn® Wall Protection
*including Corner Guards, Crash Rails, Handrails,
Door & Frame Protection*

Acrovyn® Wall Covering + Panels

Acrovyn® Doors

In an independent test laboratory, Acrovyn was evaluated for resistance to fungi in accordance with ASTM G 21-96(1996), Standard Practice of Determining Resistance of Synthetic Polymeric Material to Fungi, Acrovyn resisted the growth of five standard types of fungus. [Click for the pdf.](#)

Resilient Solutions

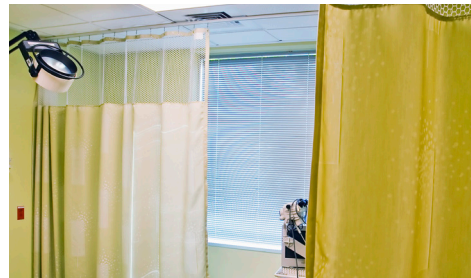

PRODUCT OVERVIEW *(continued)*

Don't forget the floor! An effective entrance flooring system removes dirt and moisture from building occupants' shoes, thus reducing the spread of potentially harmful mold, fungus, and bacteria from entering into the rest of the building. Adding proper scrape-ability and catch pans at the entrance can significantly decrease mold risk and maintenance costs while improving air quality.

Does your space call for curtains? Keeping curtains clean is easier than ever with our extensive line of curtain and track systems. These include On the Right Track®, Snap Lock and Qwik Switch™ which all allow for quick, easy, and safe removal of curtains for laundering. Another alternative is Disposable Curtains which make it easier to keep privacy curtains clear of dangerous pathogens and protect the physical health of the building's users. The disposable curtain material is treated with antimicrobial agents to protect against bacteria. Our HUSH Clean-in-Place™ curtain option doesn't need laundering, making it ideal for areas that require frequent cleanings. These privacy curtains are made with a vinyl-coated laminate, wipeable linen, and antimicrobial fabric protections that lasts the lifetime of the curtain.

Entrance Mats + Grids
including Peditred, Pedigrid (etc)

Cubicle Curtain + Track Systems
including Disposable Curtains and Clean-In-Place®
