FCF & FCFC 100/200 Series

Technical Data:
Aluminum
• Extrusion – CS uses multiple alloys & tempers which are
  established to be the most appropriate for the given use of
  individual parts. Will be one of the following: (6063-T5, T6, T52)
  (6061-T5, T6, T31) (6105-T5, T6) (6005-T5) (6005A-T5, T61),
  ASTM B221
Primary Seal
• Dual Durometer 65 Shore A, 90 Shore A, ASTM D2000
• Available in 4 colors.

Product Description:
This single gasket, flush ceiling cover is ideal for applications where
minimal visual impact is preferred. These models are also designed to
match select flush covers used in the wall.

Use This Cover For:
• Ceiling applications to align with and match select flush covers
  used on the wall.
• Suitable for acoustical tile ceiling construction – frame
  configuration available to suit flat and corner applications.
• Where hygiene is important.

Performance Characteristics:
The dual durometer TPR gasket has rigid edges designed to lock into
the aluminum retainers. This prevents hairline gaps from opening
between the gasket and retainer ensuring a hygienic seal. The softer
center section of the gasket allows full movement without the need
for grooves in the face surface which collect dirt.

Standard Finishes:
Mill finish on any exposed aluminum. Gasket is available in Black,
White, Gray, & Greige.

Installation Guidelines:
Attach the retainer to the ceiling with fasteners supplied by CS.
Insert the rigid edges of the primary seal into the retainer. For the
complete installation instructions, please visit www.c-sgroup.com.
